Vegetables

Food Buying Guide for Child Nutrition Programs
Vegetable Component for the Child Nutrition Programs

Vegetables are one of the required components of reimbursable meals in the National School Lunch Program (NSLP) and Child and Adult Care Food Program (CACFP). Vegetables may be served as part of a reimbursable meal for the School Breakfast Program (SBP) and the Summer Food Service Program (SFSP). They may also be served as part of the reimbursable snack for the NSLP Afterschool Snack Service. The meal pattern requirements are described in the Charts located on pages I-7 through I-13.

Specific requirements:
➤ Vegetables that are fresh, frozen, or canned vegetables and full-strength vegetable juice may contribute toward the vegetable requirement.
➤ Any liquid or frozen product labeled “juice,” “full-strength juice,” “single-strength juice,” “100 percent juice” or “reconstituted juice” is considered full-strength juice. To be used in meeting the vegetable requirement, the product must be 100% full-strength juice.
   • In School Meal Programs, no more than 1/2 of the total weekly fruit or vegetable requirements may be met with full-strength vegetable juice.
   • In the CACFP, full-strength juice may be used to meet the vegetable component or fruit component no more than once per day.
➤ Juice products that are less than full-strength or that contain concentrates that are not fully reconstituted may not be served as part of a reimbursable meal or snack.
➤ Full-strength vegetable juice may be used as one component of a snack when the other component is not fluid milk.
➤ Juice cannot be credited when used as an ingredient in another food or beverage product with the exception of smoothies.
➤ Snack-type vegetable products do not contribute toward meal pattern requirements. Please refer to the section titled “Products That Do Not Meet Requirements” on page 2-6 for more information.
➤ Over the course of the week, schools must offer vegetables from specific subgroups established by the Dietary Guidelines for Americans: dark green, red/orange, beans/peas (legumes), starchy, and “other” vegetables. The “additional” vegetable requirement may be met with vegetables from any subgroup. Offering specific amounts of vegetable subgroups is not required in other Child Nutrition Programs. However, serving a variety of vegetables each week helps to ensure that program participants have access to a greater variety of nutrients.
➤ The minimum creditable serving size for any single vegetable is 1/8 cup. The importance of adequate and recognizable amounts of vegetables must be considered in menu planning in order to ensure a well-balanced meal, to illustrate healthy choices from the MyPlate food guidance system and to meet meal pattern requirements.
➤ Beans and legume vegetables may be counted towards the meats/meat alternates or vegetable component, but not as both simultaneously. This includes roasted beans, such as roasted chickpeas (garbanzo beans).
In School Meal Programs or the CACFP, menu items that are mixtures of fruits and vegetables, for example, carrot-raisin salad, must be credited separately for the fruit and the vegetable components. For the component to credit, the serving must contain a minimum of 1/8 cup.

Program requirements for vegetables are based on nutritional standards and the Dietary Guidelines for Americans, which identify vegetables as important sources of many key nutrients, including potassium, dietary fiber, folate (folic acid), Vitamin A, and Vitamin C. The following tips can help you to increase the variety of nutrients offered to program participants:

- Include a variety of vegetables each week (for School Meal Programs, this includes vegetables from each of the vegetable subgroups). The DGAs recommend including a variety of vegetables from all of the subgroups – dark green, red and orange, legumes (beans and peas), starchy, and other vegetables.
- Whenever possible, serve vegetables in place of foods high in calories, saturated fats, or sodium. Make sure to keep added fats, sodium, and sugars low when preparing vegetable dishes.
- Increase the vegetable content of mixed dishes.
- Offer green salads when possible and incorporate vegetables into most meals and snacks.

During menu development, you will decide whether or not to take advantage of flexibility in crediting Vegetables and Meats/Meat Alternates (M/MA) toward the required breakfast components. If you include Vegetables or M/MA at breakfast, remember the following:

- Vegetables can be served as an extra food if not being offered as a component of a reimbursable meal, or
- In the SBP and the CACFP, vegetables may credit for some or all of the required fruits component when these guidelines are followed:
  - Equal volume measures of vegetables can be substituted for equal volume measures of fruits.
  - Vegetable juices must be pasteurized, full-strength 100% juice and count toward the limit on juice offered weekly.
  - Include vegetables during breakfast whenever possible.
  - In the SBP, 2 cups of vegetables from the red/orange, dark green, legume, and other vegetable subgroups must be served during a week that starchy vegetables are served.
  - Include good sources of fiber, such as beans/peas (legumes), during the week.
- Refer to the appropriate program regulatory guidance for further information related to the vegetable requirement.
2 Vegetables

Crediting of Vegetables

➤ A serving of cooked vegetable is considered to be drained. If it is a canned, heated vegetable, use listing in Column 4 (Serving Size Per Meal Contribution), that reads “1/4 cup heated, drained vegetable.” If it is served unheated, the appropriate listing is “1/4 cup drained vegetable.”

➤ A serving of raw vegetable used in salads containing dressing is shown as “1/4 cup raw, (pieces, shredded, chopped) vegetable with dressing.”

➤ School Meal Programs and the CACFP: raw, leafy salad greens credit at half the volume served, which is consistent with the Dietary Guidelines for Americans. For example, a 1/2 cup of romaine lettuce contributes 1/4 cup toward the dark green vegetable subgroup. Cooked leafy greens such as sautéed spinach are credited by volume as served; for example, 1/2 cup of cooked spinach credits as 1/2 cup of dark green vegetables.

Crediting of Vegetable Concentrates (Tomato Paste and Tomato Puree)

Tomato paste and tomato puree can be credited using the whole food equivalency (volume of tomatoes prior to pureeing) rather than on the actual volume served. All other vegetables and vegetable purees credit based on the finished volume served.

The following examples demonstrate how to credit tomato paste and tomato puree:

How to Use Information on Tomato Paste and Tomato Puree Concentrates

Example Using Pounds of Concentrate
Multiply the number of pounds of concentrate by the creditable 1/4 cup servings per pound of concentrate as listed in the FBG.

EXAMPLE: A recipe calls for 4 lb 12 oz (4.75 lb) of tomato paste. The vegetable yield table shows that each pound of tomato paste provides 27.6 creditable servings of vegetable. Thus, 4.75 x 27.6 = 131.1 servings. Therefore, the tomato paste in the recipe provides 131.1 creditable 1/4 cup servings of vegetable (red/orange vegetable subgroup in school meals).

Example Using Cans of Concentrate
Multiply the number of No. 10 cans of concentrate in the recipe by the number of creditable 1/4 cup servings provided by one No. 10 can of the concentrate.

EXAMPLE: Two No. 10 cans of tomato puree are used in a recipe. The vegetable yield table shows that one No. 10 can of tomato puree provides 96 creditable 1/4 cup servings of vegetable. Thus, 2 x 96 = 192. Therefore, 192 creditable 1/4 cup servings of vegetable are provided by the tomato puree.
Yield figures for vegetables are for on-site preparation. They do not allow for losses that may occur in prepared products (both pre-portioned and bulk) during freezing, storage, heating, and serving. Other factors may affect your yields: quality and condition of the food, storage conditions and handling, equipment used in preparation, cooking and holding times, serving utensils, and portion control.

**Factors Affecting Yields**

Yields of vegetables vary according to the form of the food when purchased. For example:

➤ Frozen vegetables usually yield more servings per pound than fresh vegetables since the frozen ones are cleaned, blanched, and ready-to-cook.

➤ Dehydrated vegetables yield more servings per pound than fresh, frozen, or canned because they gain weight and volume as they absorb water during soaking and cooking. Some dehydrated products continue to expand while cooling.

➤ The weight of canned vegetables varies due to different densities of the food. A No. 10 can yields an average of 12 to 13-2/3 cups and 96 oz (6 lb) to 117 oz (7 lb 5 oz).

**Definitions**

<table>
<thead>
<tr>
<th>Definition</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Count</strong></td>
<td>The number of whole vegetables contained or packed in a specific container.</td>
</tr>
<tr>
<td></td>
<td>The higher the count the smaller the size of each vegetable.</td>
</tr>
<tr>
<td><strong>Pared</strong></td>
<td>When the outer covering (skin or peel) of a vegetable is removed.</td>
</tr>
<tr>
<td><strong>Size</strong></td>
<td>The number of pieces of whole vegetables in 10 pounds of product.</td>
</tr>
<tr>
<td><strong>Tempered</strong></td>
<td>Frozen vegetables brought to room temperature; thawed but not heated.</td>
</tr>
<tr>
<td><strong>Unpared</strong></td>
<td>When the outer covering (skin or peel) of a vegetable is not removed.</td>
</tr>
</tbody>
</table>

Products That Do Not Meet Requirements

The following products do not contribute to the vegetable component in any meal served under the Child Nutrition Programs:

➤ snack-type foods made from vegetables, such as potato chips;
➤ pickle relish, jam, or jelly;
➤ tomato catsup and chili sauce (tomato paste in chili is creditable);
➤ home canned products (for food safety reasons); or
➤ dehydrated vegetables used for seasoning.

Information Included In This Section

Over 630 entries for vegetables – fresh, canned, frozen, and dehydrated – are listed alphabetically. Data for canned juices and canned soups are also included in this section.

Vegetable information includes:

➤ Yield information on common institutional packs, smaller packs, and 1-pound units of many fresh, canned, and frozen vegetables.
➤ Net weight of contents of the can (including liquid) under the can size in Column 2, except where noted.
➤ Minimum weight and volume of drained vegetables in Column 6.
➤ Yields in terms of 1/4 cup servings, unless noted.
➤ Contribution to the meal patterns.
➤ Yield information on juice concentrates, tomato paste, and tomato puree as if reconstituted to full strength.
➤ Yield information on canned soups that contain at least 1/4 cup of vegetable per cup of soup.
➤ Yield information for all vegetables based on volume, not weight. This includes dried or dehydrated vegetables.
Explanation of the Columns

The data on vegetables in the yield tables includes yield information on common types and customary serving sizes of products that you can buy on the market, as well as some USDA Foods products.

Column 1: Food As Purchased, AP
The individual foods are arranged in alphabetical order.

Column 2: Purchase Unit
The purchase unit is specified, for example, 1 can (generally No. 10, No. 2-1/2, or No. 300), 1 pound, or 1 package. You can use data for one purchase unit to determine how much product you need for a specific number of servings.

Column 3: Servings per Purchase Unit, EP (Edible Portion)
This column shows the number of servings of a given size (found in Column 4) from each purchase unit (found in Column 2). Numbers in this column have sometimes been rounded down in order to help ensure enough food for the number of servings.

Column 4: Serving Size per Meal Contribution
The size of a serving is given as a measure and/or weight or number of pieces. In most cases the serving size and contribution to the meal pattern are the same. When they differ, the contribution is stated along with the serving size.

Column 5: Purchase Units for 100 Servings
This column shows the number of purchase units (found in Column 2) you need for 100 servings. Numbers in this column are generally rounded up in order to help ensure enough food is purchased for the required number of servings.

Column 6: Additional Information
This column gives other information to help you calculate the amount of food you need to prepare meals. Column 6 information is not available for every food item.
